IN THE CLAIMS

Claims 1 to 10. (Canceled)

11. (Currently Amended) A jacket adapted to cover a wearer's wear's chest having a collar adapted to cover the wearer's neck, wherein a front opening of the jacket is defined by a curved slide fastener, and closable with a the curved slide fastener is closable so that in a closed position a portion of the slide fastener is disposed vertically along the anterior midline of the jacket and the slide fastener curves laterally and extends upwardly into the collar, so that the slide fastener in the closed position holds the collar closed over the wearer's neck with the slide fastener is offset from the anterior midline of the collar so that a slider at the top of the slide fastener in the closed position is offset from the anterior midline of the collar.

12. (Previously presented) The jacket of claim 11, wherein the curved slide fastener is coated with a thermoplastic polymer.

Claims 13 to 19. (Cancelled)

Please add the following new claims:

20. (New) The jacket of claim 11, further comprising a hood having a head covering and a face opening, the hood comprising an adjustable drawstring arrangement providing for simultaneous circumferential tensioning of the head covering to secure the hood to the wearer's head and vertical temporal tensioning of the face opening, wherein the drawstring arrangement comprises one or more cranial cord segments encircling the head covering and connected to a top portion of left and right temporal cord segments on each lateral side of the face opening, so that:

- (a) manual tensioning of the cranial cord segment acts to secure the hood to the wearer's head and to tension the temporal cord segments; or,
- (b) manual tensioning of either the left or right temporal cord segment acts to tension a cranial cord segment to secure the hood to the wearer's head.
